KEANU KERR

Software Engineer

Philadelphia, PA | +1 (512) 450-8961 | keanu@kerr.us | keanukerr.com | github.com/keanuk | linkedin.com/in/keanukerr

> Backend Software Engineer with 6+ years of experience architecting low-latency distributed systems, high-throughput financial services, and cloud-native infrastructure in Go and Java. Proven track record in schema-first API design, transactional data integrity, and systems-level Linux open-source development.

TECHNICAL SKILLS

Languages	Go, Java, Rust, Python, C, C++, TypeScript, Bash
Distributed Systems & APIs	Microservices, gRPC, Protobuf, RESTful APIs, Event-Driven Architecture
Cloud & Infrastructure	Kubernetes (K8s), Docker, AWS, Azure (AKS), Linux, CI/CD, Git
Data & Storage	PostgreSQL, Oracle DB, Snowflake, Elasticsearch, Distributed Caching & Search Indexing

PROFESSIONAL EXPERIENCE

Bread Financial — Software Engineer
Mar 2023 – Present
Philadelphia, PA

- Architect, build, and scale low-latency REST and gRPC microservices in Go powering core loan servicing and high-volume digital payment workflows.
- Spearheaded the modernization of credit bureau reporting pipelines and financial settlement workflows backed by Snowflake, enforcing strict ACID transactional integrity and auditability.
- Standardized inter-service communication across engineering teams by designing unified Protocol Buffer schemas and decoupled, contract-first API architectures.
- Orchestrate containerized workloads using Docker and Kubernetes, improving deployment reliability, fault isolation, and horizontal scalability across production environments.

General Motors — Software Engineer
Feb 2020 – Mar 2023
Austin, TX

- Engineered high-availability enterprise backend services in Java (Spring Framework, JAX-RS) integrated with high-volume Oracle relational databases.
- Architected and tuned a distributed Elasticsearch cluster, redesigning indexing strategies and query execution paths to substantially reduce search API latency.
- Established automated CI/CD pipelines and Test-Driven Development (TDD) workflows deploying to Azure Kubernetes Service (AKS), markedly reducing release-cycle defects and deployment friction.

OPEN SOURCE CONTRIBUTIONS

Noctalia (Wayland Desktop Shell) — Contributor
Aug 2026 – Sep 2026
github.com/noctalia-dev/noctalia

- Engineered an asynchronous ModemManager D-Bus integration to expose real-time cellular state (5G/LTE) and signal-strength telemetry directly within the Wayland shell UI.
- Implemented NetworkManager mobile-data state controls and authored comprehensive unit tests covering dynamic glyph rendering and connection state fallbacks.

NixOS (nixpkgs & nixos-hardware) — Contributor
Jan 2024 – Jun 2025
github.com/NixOS

- Authored and upstreamed declarative hardware configuration profiles for the Lenovo ThinkPad P14s AMD Gen 5 and HP EliteBook 845 G8, optimizing kernel parameters and power management.
- Expanded validation test coverage in `nixpkgs-check-by-name` to reliably detect and report concurrent schema validation failures in CI.

EDUCATION

University of Edinburgh — MSc in Informatics (Computer Science) — Nov 2019
University of Florida — BSc in Computer Science — May 2018
